
800-HT (Heat Treated Fiberglass Cloth)

800-HT is a continuous filament fabric that has been heat cleaned. IT is suitable for both insulation and protection against light welding sparks. The heat cleaning process produces a tan/golden brown color and a smooth surface, which reduces smoke when exposed to high temperatures. The fabric is economical, flexible and durable.

Insulation Application

800-HT, act as a finishing material that provides durability and reduces contact to fibers during fabrication.

Welding Application

800-HT is commonly used in industrial & marine sectors for protection against welding sparks.

General characteristics of 800-HT:

Product Description	Product Specification
Density	800g/m ² ± 5%
Thickness	0.8 mm
Width	1.0 metre
Roll size	1 metre x 50 metre
Color	Tan / Golden Brown
Finish	Heat Cleaned
Construction: Warp x Weft /cm	18.0 x 11.7
Warp Yarn	C11 68 4 x 1
Weft Yarn	C11 68 4 x 1
Weave	Satin
Operating Temperature	Approx 550° C
Melting Point	800°C
